

Clarification about the deliverables:

task 1: text + "formula"

task 2: code that includes the prompt phrasing, the model upload, the function/s that run through the data and whatever else you were using to create the descriptions.

task 3: the assignment_01.xlsx file created in task 2 with your manual evaluations on the selected rows.

task 4: text that documents your experiments + the code you used for it. here it's fine (even preferred) to leave only the code of experiments that did improve something. experiments that did not improve anything should be in the documentation but code is not important.

task 5: same as task 2.

task 6: same as task 3 + text with answers to the textual questions.

As for the format - please hand in notebooks, also for the text questions (use markdown cells) + csv or xlsx for tasks 3 and 6.
